Mediatix Telecom Enhances Secure Communications With Support for HTTPS

28 September 2005

Mediatix Telecom, Inc., the leader in

Voice over Internet Protocol (VoIP) access devices and gateways, announced a significant expansion to its secure product portfolio by offering support for HTTPS. With this new enhancements, Mediatix now offers its customers an unparalleled level of security and performance features designed to address the business and regulatory requirements of today's modern organizations.

Support for HTTPS offers greater security for operators by providing an extra layer of encryption for the transfer of data by using the HTTPS protocol. HTTPS is a well known standards-based mechanism to transfer information securely over IP networks. By using HTTPS, it is virtually impossible for hackers to intercept critical data. Mediatix has made this enhancement available on a variety of its most popular products.

The Mediatix product line already supports secure remote management through SNMPv3. Now HTTPS file transfers completes the offering, effectively making the products perfectly adapted to today's market. The combination of SNMPv3 and HTTPS provides a secure method to deploy and manage units in the field.

"The addition of HTTPS support further establishes our leadership role in providing secure VoIP access technology," said Alex Suter, Vice President, Worldwide Sales and Business Development at Mediatix. "Operators will benefit from knowing that they can provide VoIP services that are secure even if they use the public Internet. With HTTPS, Mediatix is taking another step towards providing its customers with products that are plug & play without compromising security."

About Mediatix Telecom, Inc.

Mediatix develops and markets advanced VoIP access devices, gateways, routers and value-added software enhancements for the enterprise, SOHO, and residential markets. Its products provide an ideal migration path for end users wishing to protect their current CPE investment (analog/digital phones, fax machines, PBX and Key Systems) while migrating to a converged IP network. Mediatix products and solutions are widely interoperable and have received commercial endorsement from some of the world's leading manufacturers of telecommunications equipment as well as from large telecommunication carriers. Mediatix is a wholly owned entity of Media5 Corporation, a high technology holding company based in the Montreal area, in Canada. Media5 Corporation also owns M5T, a software provider focused on delivering the latest in SIP software technologies and security solutions to companies developing applications for real-time multimedia communications over IP. Mediatix has corporate offices in the Montreal area, in Canada and regional offices in the United States, Europe, Latin America and Asia. For more information, please visit www.mediatix.com.
